

**NCC Bostad Stockholm Norr** erects four semi detached houses (= 8 dwellings) in Bollstanäs, Upplands Väsby, Stockholm.

## ERECTING OF WALLS OF BOTTOM FLOOR

Erecting of outer walls.

Time for the partition walls.

One part of the double partition walls is furnished with mineral wool for better sound-absorbing.

Fast install of walls.

Light walls.

The walls stands on jointing composition which hardens and works as support.

This proceeding also gives the maximum impenetrability against air leakage.

**Precision adjustment.**

**Open truss webs  
all the way to the walls.**

**The vertical resesses in  
the joints of the walls  
are filled with jointing  
composition.**

**Groove-like resesses  
with irregularities in  
bottom gives better  
fixation against share  
movements.**

**Detail of an outer edge.**

**The houses maid all separated from each other gives the best sound-absorbing effects between the two residences.**
